EDUCATION

Texas A&M University at College Station	Bachelor of Science in Computer Science Minor: Mathematics Overall GPA: 4.00 Honors: Dean's Honor Roll	May 2025
--	--	----------

RELEVANT COURSEWORK

Data Structures and Algorithms · Design and Analysis of Algorithms · Machine Learning · Foundations of Software Engineering · Principles of Data Science · Programming Languages · Computer Organization · Parallel Computing · Cloud Computing · Data Analytics for Cybersecurity

EXPERIENCE

Texas A&M University - Peer Teacher; College Station, TX August 2022 - Present

- Assisted a professor in teaching 100+ students by answering student questions and grading 200+ assignments
- Held regular office hours to provide additional support and answer questions outside of class for 300+ students
- Mentored students on weekly assignments, providing guidance on planning, coding, and debugging

Sabre Corporation - Software Engineering Intern; Southlake, TX May 2023 - August 2023

- Created three automated Unit Testing Frameworks in PHP and Python, reducing effort required to test code by 80%
- Wrote and deployed a cloud function in Google Cloud Platform to find active user data, saving 2 hours of labor
- Queried 10+ MySQL tables in conjunction with Python to retrieve and format user data for 100+ users
- Practiced Agile Methodology through daily scrum meetings and task logging via Jira

PROJECTS

NBA Player Success Predictor March 2024 - May 2024

- Cleaned an existing dataset with 1300+ observations and 21 features for binary classification analysis
- Trained four machine learning models to predict longevity of a player's career based on rookie year stats
- Built and optimized a neural network, logistic regression, k-nearest-neighbors, and decision tree models in Python
- Achieved an overall accuracy of 77% while preventing model overfitting

FinQuest Financial Planning Game January 2024

- Built a choose-your-own-adventure style web game to teach personal financial planning to teens
- Designed engaging, interactive scenarios to simulate real-life major financial decisions and consequences
- Completed during the TAMUhack Hackathon in a team of 4 in 24 hours using Next.js

Tiger Sugar Point-of-Sale System November 2023

- Developed a web application to handle customer, cashier and manager operations for Tiger Sugar Boba Tea
- Created a GUI with Next.js for ordering items and managing restaurant details, such as inventory and sales data
- Designed a PostgreSQL database of 5 restaurant entities, allowing for streamlined store management
- Wrote backend REST API calls to PostgreSQL database using Python Flask and tested using Postman

SAFECHAT Toxicity Detection October 2022

- Developed a text toxicity detection Discord Bot in a team of four during the TAMU Datathon 24 hour event
- Trained an existing machine learning NLP model with 5000+ data points to classify a phrase as toxic or not
- Deployed a website using Streamlit to showcase the features, capabilities, and usage of the model

ADDITIONAL INFORMATION

Awards: 1st place at the TAMU Datathon for "Best Use of Cohere's Natural Language Processing"

Technical Skills: Python, C++, Java, JavaScript, React.js, HTML/CSS, SQL, Linux, UNIX, Agile, Scrum, Docker, Git
